

RIETER

Rieter at a Glance

RIETER GROUP

Rieter is the world's leading supplier of systems for short-staple fiber spinning. Based in Winterthur (Switzerland), the company develops and manufactures machinery, systems and components used to convert natural and man-made fibers and their blends into yarns. Rieter is the only supplier worldwide to cover spinning preparation processes as well as all four end spinning processes currently established on the market. Furthermore, Rieter is a leader in the field of precision winding machines. With fifteen manufacturing locations in ten countries, the company employs a global workforce of some 4 420, about 21% of whom are based in Switzerland.

Rieter is a strong brand with a long tradition. For more than 225 years Rieter's innovative momentum has been a powerful driving force for progress in the spinning mill industry. Products and systems are ideally tailored to customer needs and mostly produced in the markets where the customers are located. With a global sales and service organization and a strong presence in the core markets China and India, Rieter as market leader is well positioned in the global competitive environment.

For the benefit of shareholders, customers and employees, Rieter aspires to achieve sustained growth in enterprise value. With this in mind, Rieter seeks to maintain continuous growth in sales and profitability, primarily through organic growth, but also through strategic alliances and acquisitions. The company comprises three business groups: Machines & Systems, Components and After Sales.

ESTABLISHED PREMIUM SUPPLIER WITH INNOVATIVE PRODUCTS AND SERVICES

The Business Group Machines & Systems develops, produces and distributes new equipment as spinning systems or as single machines. Blowroom and cards are used for fiber preparation; draw frames, combers and rowing frames are used for spinning preparation; and ring, compact-, rotor and air-jet spinning machines are used for end spinning. The offer is supplemented by planning services and automation solutions as well as ESSENTIAL, the Rieter Digital Spinning Suite, as a digital platform for the complete spinning mill.

The Business Group Components develops, produces and distributes technology components and precision winding machines for use in the textile value chain. Technology components come into contact with fibers and affect yarn properties; they are used in new or in existing machines and have to be replaced at regular intervals during operation. Precision winding machines are used for downstream yarn processing, such as dyeing.

The Business Group After Sales develops, produces and distributes spare parts for Rieter machines as well as upgrades, conversions and retrofits. After Sales also sells technology components that are not included in the range of products offered by the Business Group Components. After Sales also offers services that enable Rieter customers to improve the efficiency and effectiveness of their spinning mills.
