

Bräcker

BERKOL[®] Premium Cots

Only the best quality allows the consistent spinning of high-quality yarn

Bräcker - Enjoy Performance

Uncompromising quality standards and extensive industry knowledge make Bräcker the market leader in the manufacture and marketing of key components for ring spinning machines such as cots, aprons, rings and travellers. This is evident not only in the wide range of excellent products but also in the distinctive competence of the staff to advise and provide solutions.

Thanks to leading-edge technology and innovative components manufacturing, we as a quality-certified company, guarantee with our products maximum production capacity together with maximum operational reliability. Through constant monitoring, we ensure optimal quality consistency in our production.

The profound knowledge of technology and components gathered over decades is continuously enhanced and perfected. Our staff has many years of industry knowledge, giving you as a customer the certainty that the optimal products will be specified for your specific requirements.

As a Bräcker customer you can benefit from fast and direct access to a worldwide sales, consultancy and service network – and you can rely on a competent partner as your contact person. The representatives are a part of your particular country's culture and they are in constant contact with the main office. So the knowledge gained in practice flows continuously into innovating products and services.

The Bräcker advantages in a nutshell: consistent increase of profit and success for your company!

Product qualities of BERKOL® Premium Cots

	Designation	Colour	Hardness shore A
	BERKOL 63	petrol	63
	BERKOL 65 S	brown	65
	BERKOL 65	red	66
	BERKOL 70	blue	70
	BERKOL 74	green	76
	BERKOL 83	olive	83
	BERKOL 75	black	80

High quality BERKOL® cots enable to process various raw materials in short staple spinning under all climatic conditions. As a key component of the spinning process, BERKOL® cots determine the yarn quality and set the performance bar for the overall efficiency of a spinning mill. By choosing BERKOL® cots together with the well proven BERKOL® aprons, our customers achieve best results in terms of productivity and benefit from BERKOL®'s valuable experience as a leader in rubber technology.

Application

BERKOL® cots are suitable for any kind of short staple spinning process, for roving frames and for the spinning preparation processes such as drawing frame and combing. All common dimensions are available and meet OEM's requirements.

Advantages

- outstanding running performance
- consistent yarn quality
- excellent fiber guidance
- reduced lap formation and yarn breaks
- high efficiency due to less machine downtime
- long lifetime
- best grindability

Spinning mills all over the world benefit from BERKOL®'s total solutions. High quality standards of BERKOL® are combining the rubber cots with state-of-the-art maintenance. Best grinding results are implemented with BERKOL® grinding and maintenance machines, which provide a longer service life by reducing maintenance costs in an efficient manner.
